

Whirlwind ISO-2

DUAL LINE LEVEL ISOLATOR and BALANCER

The ISO-2 is a two channel isolation box and line balancer.

As an isolation unit, use it to isolate lines to press and video feeds or on-stage power amps. It's a handy hum and buzz fighter for broadcast or live sound applications.

As a balancer, it converts unbalanced lines from CD players, tape decks, etc. to balanced for long cable runs.

Each channel features:

- XLR or 1/4" input
- Ground-lift button
- Polarity reverse button (Channel 2 only)
- Whirlwind's own TRSP-600 transformers ensure flat frequency response and low distortion.

Model #: ISO-2

Frequency Response: 20Hz-20kHz ± 0.5 dB at +10dBm input

Maximum Input Level: +28dBm

Input Impedance: 600 Ohms

Output Impedance: 600 Ohms
